   Respiratory protection:
   Use suitable respiratory protective device in case of insufficient ventilation.
   Use suitable respiratory protective device when aerosol or mist is formed.
   Protection of hands:
   Protective gloves
   The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.
   Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture.
   Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation
   Material of gloves
   Sensibilization by the components in the glove materials is possible.
   The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material cannot be calculated in advance and has therefore to be checked prior to the application.
   Penetration time of glove material
   The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.
   For the permanent contact gloves made of the following materials are suitable:
   Butyl rubber, BR
   Nitrile rubber, NBR
   Neoprene gloves
   Eye protection:
   Contact lenses should not be worn.
   Safety glasses with side shields or face shield strongly suggested.

   Body protection: Protective work clothing
   Limitation and supervision of exposure into the environment No special requirements.
